

**Amendments to the Specification:**

Please replace the previous paragraph [0030] with the following:

[0030] FIG. 3 further shows the insulated doors 38 that can limit heat penetration into the housing 10 while providing ready service access to the chilling units 12 and the coolant lines 16. A multiple-unit mounting rack 42 can provide stable support for the chilling units 12, and potentially can be equipped to attenuate at least to some extent motions that apply mechanical stress to the coolant lines 16. One or more piping support structures 44 can be positioned to provide mounting points for a plurality of coolant line guides 46. The flanged hole 48 accepts the flange of the coolant line guide enclosure, shown in FIG. 2.
